VAULTER – Secure API Key Manager

SUBMISSION OVERVIEW

The following documents have been submitted as part of the **Vaulter Project** report:

- Link to the published website

- All prompts used to generate code and results

- Performance and evaluation report

- Tech stack used

- 1 minute demo video

PROJECT GOAL

Vaulter wants to give developers a safe and easy-to-use platform to handle, protect, and keep track of API keys. The main idea is to reduce the dangers of keeping keys stored by hand, by using strong AES-256 encryption, secure JWT authentication, and a clean, modern glassmorphic dashboard, making everything both safe and efficient.
